

Faculty of Business Administration and Economics

## **Introduction to Scientific Working**

The formal structure of term and seminar papers as well as Bachelor and Master  
Theses

**Department Economics**

**Chair of Institutional Economics and Economic Policy**

**Prof. Dr. Hehenkamp**

**Paderborn, June 2024**

# **Outline**

## **1 Content-oriented Guidelines**

- 1.1 Finding your Topic
- 1.2 Research Question/ Desired Outcome
- 1.3 Concept and Structure
- 1.4 Literature Research
- 1.5 Organization and Writing Phase

## **2 Structure and Layout**

- 2.1 Font/ Page Formatting
- 2.2 Outline
- 2.3 Information on Structuring and Single Outline Elements
  - 2.3.1 List of Contents (Structure of the Text Part)
  - 2.3.2 List of Tables and Figures
  - 2.3.3 List of Abbreviations
  - 2.3.4 Introduction
  - 2.3.5 Conclusion
  - 2.3.6 Literature References
  - 2.3.7 Appendix
  - 2.3.8 Statutory Declaration
- 2.4 Information on the Edition of the Text Part
  - 2.4.1 Language Requirements
  - 2.4.2 Citation
  - 2.4.3 Footnotes
  - 2.4.4 Formulas

## **3 Top-Ten of Writing an Academic Paper**

## **4 Checklist**

## **5 Bibliographic Example**

**The chair of Institutional Economics and Economic Policy does not guarantee for correctness and completeness of the given information and can hence not assume responsibility for any occurring problems (e.g. deadline defaults etc.)! It is advisable to continuously consult your supervisor during the edition of your academic paper.**

## 1. Content-oriented Guidelines

The following section comprises information on the content-oriented guidelines, which should be considered while writing an academic paper. In particular, the research question and the desired outcome, basics on dealing with literature and research as well as the organization of the writing phase are considered.

### 1.1 Finding your Topic

The first and one of the most important steps in the research process is finding a topic. Depending on whether you are writing a thesis or a seminar paper, there are differences in the methods for finding a topic.

Seminar Papers:

- Topics are typically assigned by the instructor
- Ensure that you understand the scope and requirements of the assigned topic

Thesis:

- Topics can either be assigned or chosen in consultation with your supervisor
- Discuss potential topics with your supervisor early in the process
- Select a topic that aligns with your interests and the expertise of your supervisor

### 1.2 Research Question/ Desired Outcome

- What exactly is supposed to be revealed?
- What is the background and which research area is affiliated with it?
- Which theories exist that could help to analyse the problem/ research question?
- Which empirical evidence or theories are connected to the objective of research?

Field of research → Problem → Research question → Develop an answer
---

- The structuring is part of the (research) work and shows the way in which a topic is understood and approached. It reflects the logical construction of the work and allows a first insight.

### 1.3 Concept and Structure

- Very important: Always ask the questions “What is the overall purpose for all this?”, “What do I want to communicate with this paper?”
  - Answer the question in the text, especially in the introduction.
- Watch out for the Central theme / Leitmotif.  
For example: “ In chapter one the work of XY was introduced and as a conclusion to that ... Hence, the model by AB will be presented which in contrast to the work of XY states that ...”
- “Less is more”: If a literature review is not requested it is better to work with few core results that you can comprehend, than with numerous results which are not completely understood.
- Be aware that your explanation is complete. Readers should be able to understand the core results without having to look in your sources or other papers.
- Research papers (especially their structure) can help you to get started with your concept. You can also look at good examples of other papers (e.g. on the website of the chair of institutional economics and economic policy).

### 1.4 Literature Research

- Look for new or additional literature on your own:
  - Academic articles in international economics journals
  - Academic books
- As a starting point for literature research use, e.g., *Google Scholar*, where you can find solely scientific texts.
- Use databank-instruments, which are provided by the library. For example: *econlit*, *econis* etc.
- Consider possible waiting times for your time management.
- When using the source *Internet* watch out for: Seriousness, respectability and correctness. **Due to possible changes on the websites, you must save the source, print it and enclose it to your paper.**
- Quality not quantity of sources is decisive for a good paper. If you set a focus on one specific analysis of a single model or study and the empirical methods and evidence used is explained in detail, you tend to need fewer sources.
- Check if all quoted texts are included in the bibliography.
- Before submission of the paper, check if the latest versions of the working papers are used.
- **Evaluation of the literature:**
  - Journal rankings facilitate the paper selection (e.g. Handelsblatt-Ranking); At Google Scholar one can, e.g., see how often an article is quoted by other authors.
  - Describing ideas in your own words signals correct understanding of the original source.
  - Critical analysis of model assumptions (Question the model results!)
  - Try to include own thoughts and ideas.

- Be critical about the original sources and the papers you quote. Show that you yourself have an opinion towards the topic. Do not just reproduce material!

## 1.5 Organization and Writing Phase

- Refocus on the problem that needs to be solved:
  - Which question do I have to answer and what do I want to reveal?
  - Regarding literature: Which are the relevant aspects of the problem? Which are the most important theories I can use to analyse the problem? Which empirical evidence exist to support or confute theories when comparing different theories?
- The paper must show clear structure
  - Present relevant aspects and sequence them.
  - Try to keep the structure simple and clear.
- Discussion of the central research question and a valid analysis
  - Introduction: Explain the background of the problem and define the research question.
  - Organization of the main part: The most important aspects of the problem will be discussed in the main part, using the chosen literature. Therefore it is important to have decided to which length the problem should be discussed. Which theoretical and empirical aspects are part of the problem and which are not? What is relevant? Furthermore it is important to decide how in- depth the paper should be, how detailed the theories and empirical evidence needs to be discussed. The messages of every section and every chapter need to be emphasized. And never forget to quote correctly and match the text to the requested format!
  - Conclusion: A final conclusive statement needs to be made.

## 2. Structure and Layout

This section is on the formal design and structuring of your paper. Therefore, essential components of a scientific work are listed and hints for their edition are given. The final part contains information comments on the formal structure of the text part of the paper.

### 2.1 Font/ Page Formatting

- Upper margin: 2,5 cm
- Bottom margin: 2 cm
- Left margin: 2,5 cm
- Right margin: 2,5 cm

- A common font type has to be used (e.g. Times New Roman or Arial).
- Character formatting in 12pt and line spacing 1,5 for the normal text.
- Character formatting in 10pt and single line spacing for footnotes.
- Heading with title in short form and name of the student.
- Pages should be consecutively numbered.
- Justification is desired.
- Word division should be performed.

It is advisable to use the template provided by our department to avoid layout mistakes.

## 2.2 Outline

- A scientific work contains the following components:

Cover Page

List of Contents

List of Figures (if any)

List of Tables (if any)

List of Abbreviations (if any)

Introduction

Main Part

Conclusion

} Text Part/ Main Component of the Paper

Literature References

Appendix

Statutory Declaration

## 2.3 Information on Structuring and Single Outline Elements

- Page counting starts with the List of Contents.
- List of contents, list of figures and tables (if any), list of abbreviations (if any), literature references, appendix and statutory declaration are numbered in Roman numerals under usage of small letters (i, ii, iii, ...).
- Counting and numbering of the text part starts with the introduction under usage of Arabic numerals (1,2,3, ...).
- Page numbering takes place uniformly in the footer right-justified.

### 2.3.1 List of Contents (Structure of the Text Part)

- The table of contents gives a complete outline of the single chapter headings and the corresponding page numbers.
- The decimal classification is particularly advantageous, e.g.:

- 1 Introduction
- 2 Integration Theory: An Overview
  - 2.1 Theoretical Concepts
    - 2.1.1 The Classical Concept of uniform Integration
    - 2.1.2 The Modern Concept of differentiated Integration
    - 2.1.3 The Future Concept of transverse Integration
  - 2.2 Graphical Illustration
- 3 Integration and the European Union: An Empirical Analysis
  - 3.1 Hypothesis
  - 3.2 Empirical Results
  - 3.3 ...
- 4 ...
- 5 Conclusion

- A consequent and conclusive line of thought is reflected in a formally logical structure with according bullet points.
- Subsections belonging to the same outline level should all refer to one superordinated problem (i.e. the subsections 2.1.1-2.1.4 all describe the superordinated issue 2.1).
- Single subsections should ideally be balanced.
- For the subdivision it is important that each outline level exhibits at least two bullet points. I.e. if there is a subsection 2.1.1, there has to be at least another section 2.1.2. Avoid using too many subsections (as far as possible no subdivision “2.1.1.1”).
- A clearly arranged outline and reasoning for the chosen structure in the introduction facilitate the access to the paper for the reader. This constitutes a necessary condition for a qualitatively fulfilled work.

### 2.3.2 List of Tables and Figures

- Tables and Figures have to be numbered consecutively, in addition to that, a precise designation of content should be given, e.g.:

*Table 2-3: Money market in dependency on earnings Y*

- If there is a reference to a table or figure in the text, the table or figure must be easy to find by indications of numbers and page numbers. Tables and figures have to be given a source if they are based on primary data, e.g.:

*Source: German Federal Statistical Office (1984a), p. 22f.*

- If one uses a table of another author and changes its content, the note: Source (“own depiction following *Origin of the Table*”) has to be added.
- Irrelevant and redundant information should be excluded.
- Tables and Figures are used to present contents in a clearly organized manner with respect to different aspects. They may include quantitative or qualitative information that are discussed in the text.
- Multiple pages of tables should be avoided (Scaling down!).
- Tables and Figures in landscape format have to be arranged so that the reader can turn the copy clockwise.
- Extensive use of tables and figures (as well as longer extracts from original sources, legal texts) should only be made in an appendix or multiple appendices, in order to improve the flow of reading.

### 2.3.3 List of Abbreviations

- Abbreviations should only be used if absolutely necessary as it complicates the flow of reading. Common abbreviations can be used for the bibliography and literature references:

Fig.= figure  
ed. = edition  
vol. = volume  
i.e.= id est  
et al. = et alii  
ibid.= ibidem  
eds. = editors  
Ch. = Chapter  
p. = pagina, page  
Tab. = Table

- Specific abbreviations from the text, tables, or the bibliography must be clarified in a listing, e.g. AER = The American Economic Review, JPE = Journal of Political Economy, or ZfN = Zeitschrift für Nationalökonomie.

### 2.3.4 Introduction

- Describes the motivation behind the paper.
- Clarifies the problem and differentiates it from other problems.
- Shows the overall approach and describes the chosen structure of the paper.

### 2.3.5 Conclusion

- Final Section of the paper, where important results are summarized.
- Prospects of future research topics with respect to the present problem setting.

### 2.3.6 Literature References

- The references contain all literature sources, which are referred to in the academic paper.
- **The references must be structured in a list of all titles, alphabetically organized by authors. If multiple works of the same author exist, they have to be ranked chronologically. Please avoid classifications concerning the type of the literature (books, journal articles, internet sources, etc.).**
- For two authors you cite both authors in-text. For three or more, you cite the first author and add “et al”. In the bibliography, all authors are listed.
- With regard to the layout of the bibliography there are some norms:
  - The first line of each source starts at the left margin, the following lines are indented by 0,5 cm.
  - Between sources there should be one empty line.
- The following table summarizes which information has to be mentioned with regard to the different types of literature in the references:

Type of literature	Standard format in the list of references	Examples	Remarks
Books	Last name of the author, Initial of the first forename (Year of publication): <i>Full Title</i> , vol. (if necessary), edition (if necessary), Place: Publisher.	Belleflamme, P.; Peitz, M. (2018): <i>Industrial Organization: Markets and Strategies</i> , 2nd edn, Cambridge: Cambridge University Press. Vojnović, M. (2016): <i>Contest theory: Incentive mechanisms</i>	<ul style="list-style-type: none"> <li>• Book title in italics.</li> <li>• The edition is provided only if it is not the first.</li> <li>• If there are several books of the same author with the same</li> </ul>

		<i>and ranking methods</i> , New York: Cambridge University Press.	year of publication, they are numbered with small letters after the year of publication.
Journal article	Last name of the author, Initial of the first forename (Year of publication): Full Title. In: <i>Full title of the journal</i> , volume(issue), page.	Richards, M.R. and Whaley, C.M. (2024): Hospital behavior over the private equity life cycle. <i>Journal of Health Economics</i> , 97, p.102902. Hehenkamp, B.; Wambach, A. (2010): Survival at the center – The stability of minimum differentiation. In: <i>Journal of Economic Behavior and Organization</i> , 76(3), 853-858.	<ul style="list-style-type: none"> <li>• Journal title in italics.</li> <li>• If journal titles are mentioned in abbreviated form, these abbreviations have to be explained in the List of Abbreviations (see Section 2.3.3).</li> </ul>
Articles from collected editions	Last name of the author, Initial of the first forename (Year of publication): Full title. In: Last name of the editor, Initial of the first forename of the editor (Ed.), <i>Full title of the compilation</i> , Volume (if necessary), Place: Publisher, page.	Varian, H. (2019): Artificial Intelligence, Economics, and Industrial Organization. In: Goldfarb, A.; Gans, J.; Agrawal, A. (eds), <i>The economics of artificial intelligence: an agenda</i> , Chicago; London: The University of Chicago Press, 399–419.	<ul style="list-style-type: none"> <li>• Compilation title in italics.</li> </ul>
Qualification work (diploma thesis, dissertation, etc.)	Last name of the author, Initial of the first forename (Year of publication): Full Title, Type of article, Institution, Place (if necessary).	Endres-Fröhlich, A. (2022): <i>Essays on industrial organization and networks: retail bundling, exclusive dealing, and network disruption</i> . Wirtschaftswissenschaftliche Dissertation, Universität Paderborn.	<ul style="list-style-type: none"> <li>• Article title in italics.</li> <li>• The place is mentioned only if not named in connection with the institution.</li> </ul>
Discussion papers, working papers, research reports, etc.	Last name of the author, Initial of the first forename (Year of publication): Full title, name of the collection/ discussion series, number of the paper.	Baldwin, R.; Martin, P. (2003): <i>Agglomeration and Regional Growth</i> , C.E.P.R. Discussion Papers, 3960. Kaplan, S.; Klebanov, M.; Sorensen, M. (2008): <i>Which CEO Characteristics and Abilities matter for success?</i> , Swedish Institute for Financial Research Conference on the Economics of the Private Equity Market, AFA 2008 New Orleans Meetings Paper SSRN, 972446. Michaelis, J. (2002): <i>Optimal Monetary Policy in the Presence of Pricing-to-Market</i> , Volkswirtschaftliche Diskussionsbeiträge der Universität Kassel, 33/02.	<ul style="list-style-type: none"> <li>• Paper title in italics.</li> </ul>
Contributions from newspapers/magazines	Last name of the author, Initial of the first forename (Year of publication): Full title. In: <i>Name of the newspaper/magazine</i> , issue number (if necessary), publication date, page.	Namujju, L. D.; Acquah-Swanzy, H.; Ngoti, I. F. (2023): An IAD framework analysis of minigrad institutions for sustainable rural electrification in East Africa: A comparative study of Uganda and Tanzania, in: <i>Energy Policy</i> , 11/2023, vol. 182.	<ul style="list-style-type: none"> <li>• Newspaper/Magazine title in italics.</li> <li>• In general, use the abbreviation „N.N.“, if the author is unknown.</li> </ul>

		Hehenkamp, B.; Kaarbøe, O. M. (2020): Location choice and quality competition in mixed hospital markets, in: <i>Journal of Economic Behavior &amp; Organization</i> , vol. 177, 09/2020, 641–660.	
Internet sources	Last name of the author, Initial of the first forename (Year of publication): <i>Full title</i> , [online] direct link [Date of retrieval].	Universität Duisburg-Essen (2023): Plagiarism in Academia, [online] <a href="https://www.uni-due.de/en/good-research-practice/grp-plagiarism.php">https://www.uni-due.de/en/good-research-practice/grp-plagiarism.php</a> [11/27/2023].	<ul style="list-style-type: none"> <li>• Article title in italics.</li> <li>• In general, use the abbreviation „n.d.“, if the year of publication is unknown.</li> <li>• <b>Do not use hyperlinks.</b></li> </ul>

- **Online sources can be changed often or can even be deleted; it is advisable to save or print such sources and at best to only use them in exceptional cases.**
- **The printed internet sources have to be added to the paper’s appendix!**

- Depending on the extent of the internet sources it is not necessary to print the websites in the appendix. However, in the PDF version the complete appendix must be available.

### 2.3.7 Appendix

- Main statements and facts including figures and tables are listed in the main part of the paper.
- The appendix of the paper includes less relevant, detailed information that are not important enough to be included in the main part of the work. However, these are too important to be completely omitted.
- You need to make a reference to the Appendix in the text.
- Collected data sets, auxiliary calculations, huge graphics and tables for illustration and other relevant (but non-necessary) models/calculations/examples are typical examples for information that belong to the appendix.
- Tables and Figures in the main body should be numbered sequentially (e.g., Table 1), while tables and figures in the appendix should be prefixed with an "A" (e.g., Table A2).
- **Particularly important: Used internet sources belong to the appendix because they often change or are completely deleted. It is advisable to immediately save the utilized internet material, e.g. as a screenshot or PDF. Please note that the saving of a link does not exclude changes in the website content and is therefore inappropriate.**

### 2.3.8 *Statutory Declaration*

- A template for a statutory declaration can be accessed on our chair homepage.
- Please cross out not applicable statements regarding the storage of your work.

## 2.4 Information on the Edition of the Text Part

The following section contains remarks on the formal composition of the text part of the paper.

### 2.4.1 *Language Requirements*

- Professional terminology has to be applied, but only where it makes sense.
- Make use of a precise language (simple and clear sentence structure).
- In German papers do not utilize first person singular or plural, respectively.
- Scientific language means writing in an objective and defined manner (no story telling).

### 2.4.2 *Citation*

- **Each citation has to be verifiable.** Therefore, text passages, tables, graphics, etc., taken from other sources have to be indicated accordingly. A breach of this rule can lead to the non-recognition of the work (due to plagiarism)!
- The source must also be stated for information not taken from literature but based in personal inquiries and questionings.
- Citation is performed following the **Harvard method**.
- It is recommended to discuss the reference style with your supervisor, as there are variations within the Harvard style. Consistency in reference style throughout the document is crucial once a style is chosen.

### Direct Quotes

- Please use double quotation marks (Quotation in quotation: single) and keep orthography and syntax.
- Direct quotes that are longer than 3 lines have to be in size 10 and indented with single line spacing.
- Reference will be made directly after the quotation like the following: (Milgrom and Roberts, 1992, p.75).
- Specific page references: Note a “f” for two pages and a “ff” for more than two pages.

- Up to two authors will be mentioned (Milgrom and Roberts, 1992, p.75), if there are more use: (Schmidt et al., 1982, p.339).
- If the same source is quoted twice or multiple times in succession, the names of the authors are replaced by „ibid.“ or „ebd.“.
- Should you quote an English text, it will remain in English.
- Only when the original source is non-accessible, a secondary source can be quoted.
- Each quotation has to be inspected for whether it is taken out of its original context and therefore if its initial message is changed.

### Omission and changes

...	If you ommit one or more words.
(...).	If you ommit a whole sentence.
[ ]	For changes as for example additions and insertions.
[sic!]	You quote directly but you assume that there is a typographical error.

### Indirect quotes

- Indirect quotes mean that the content is based on an external source or that this part is an analogous reproduction of someone else’s work.
- The Harvard citation method is used: Source references are made directly in the text, after the quotation, in a shortened way.
- Examples:
  - As was stated by Dreher et al. (2004, p. 10) and has been empirically verified by Treisman (2000) and Knack et al. (2003)...
  - The link within this concept is drawn by Eaton and Kortum (2001, 2002), Baldwin et al. (2001), and Baldwin and Martin (2003).
  - Following ideas of trade based growth models tracing back to Grossman and Helpman (1990, 1991), we develop a model in which endogenous growth and agglomeration...
  - A major stream of regional economics explains the emergence of a core periphery pattern through transportation costs and economies of scale (Krugman, 1991a, 1991b; Krugman and Venables, 1995).

#### 2.4.3 Footnotes

- The most common type of annotations in written academic work.

- Footnotes provide information which would be disturbing if stated directly in the text as for example additional sources, indications for other parts of the work, or deviations from the central theme of the work.
- The reference point in the text of a footnote is to be indicated by a superscript Arabic number.
- All footnotes have to be numbered consecutively.
- The text of the footnote itself is to be arranged at the end of the same page.
- Overall, footnotes should seldomly be used, only if it is really necessary.
- **Be careful:** The citation method will not take place in the footnotes but in the main text.

#### 2.4.4 Formulas

- Symbols used in mathematical formulas have to be clearly defined when first used.
- To improve the flow of read a uniform formula notation is recommended. If applicable, a list of all symbols used must be created and put at the end of the work.
- In order to enable references amongst formulas a numeration is required. The numeration can be structured in accordance to the chapters and should consistently be at the right margin. The formulas should be centered and set apart from the text through blank lines.
- Formulas should be placed centered and separated by blank lines from the text
- Example:

$$C = c_0 + c_1 YV \quad (1.5)$$

### 3. Top-Ten of Writing an Academic Paper

1. **Honesty**
2. **Objectivity**
3. **Verifiability**
4. **Reliability**
5. **Validity**
6. **Comprehensibility**
7. **Relevance**
8. **Logical Reasoning**
9. **Originality**
10. **Plausibility**

#### 4. Checklist

(Balzert, H.; Schäfer, C.; Schröder, M.; Kern, U. (2008): *Wissenschaftliches Arbeiten. Wissenschaft, Quellen, Artefakte, Organisation, Präsentation*, Witten: W3L.)

##### **Completeness and Form/ Layout**

- Does the paper include all the required elements?
- Is the layout and typography correct?
- Is the outline etc. flawless and up to date?
- Is it clear what is part of the introduction, Main Part, and Conclusion?

##### **Content: Introduction**

- Did you present the topic and mentioned the desired outcome at the beginning?
- Is the overall direction of the research question and your personal interest in it clearly recognizable?
- Did you point out the significance of the topic for the subject field?
- Is the differentiation of the topic appropriate and well explained?

##### **Content: Main Part**

- Can you identify a logical reasoning based on the chapter headings?
- Did you address existing theories and models of the field?
- Did you describe the methodology of the research?
- Is the content verifiable?
- Are the criteria for the evaluation clear and acceptable?
- Are the results objectively and factually?
- Do all chapters have an introduction, conclusion and connecting passages?

**Content: Closing**

- Is there a summary of the most important findings at the end?
- Has the research question been answered?
- Is the personal contribution recognizable?
- Is there a prospect on topics that are still outstanding?

**Comprehensibility**

- Is there a correct and adequate definition for all important terms?
- Are all unknown abbreviations listed in the List of Abbreviations?
- Are all sources listed correctly and quoted properly?
- Is the content reduced to the essential?
- Will someone who had not known the paper before, will come to the same main statements?
- Have unnecessary repetitions and diffusiveness been avoided?
- Is the content supported by visualizations?

**Style of Language/ Expression**

- Is the style objective, factual, and impartial throughout the paper?
- Is a subjective evaluation foregone?
- Is a technological or scientific terminology used and used properly?
- Is the content presented precisely and clearly?
- Are long convoluted, complex sentences separated into several clear sentences?
- Have unnecessary fillers, expletive words, and adjectives been avoided?
- Have unnecessary buzz words and colloquial language been avoided?

## 5. Bibliographic Example

By making use of the stated literature in this document on academic writing, the following shows the structure of an exemplary bibliography:

Baldwin, R.; Martin, P. (2003): *Agglomeration and Regional Growth*, C.E.P.R. Discussion Papers, 3960.

Baldwin, R.; Martin, P.; Ottaviano, G. (2001): Global Income Divergence, Trade, and Industrialization: The Geography of Growth Take-Offs. In: *Journal of Economic Growth*, 6(1), 5-37.

Balzert, H.; Schäfer, C.; Schröder, M.; Kern, U. (2008): *Wissenschaftliches Arbeiten - Wissenschaft, Quellen, Artefakte, Organisation, Präsentation*, Witten: W3L.

Belleflamme, P.; Peitz, M. (2018): *Industrial Organization: Markets and Strategies*, 2nd edn, Cambridge: Cambridge University Press.

Deutsches Institut für Wirtschaftsforschung (DIW) (n.d.): Übersicht über die Arbeitskosten, [online] <http://www.diw.de/publ.html> [02.02.2000].

Endres-Fröhlich, A. (2022): *Essays on industrial organization and networks: retail bundling, exclusive dealing, and network disruption*. *Wirtschaftswissenschaftliche Dissertation*, Universität Paderborn.

Hehenkamp, B.; Kaarbøe, O. M. (2020): Location choice and quality competition in mixed hospital markets, in: *Journal of Economic Behavior & Organization*, vol. 177, 09/2020, 641–660.

Hehenkamp, B.; Wambach, A. (2010): Survival at the center – The stability of minimum differentiation. In: *Journal of Economic Behavior and Organization*, 76(3), 853-858.

Kaplan, S.; Klebanov, M.; Sorensen, M. (2008): Which CEO Characteristics and Abilities matter for success?, Swedish Institute for Financial Research Conference on the Economics of the Private Equity Market, AFA 2008 New Orleans Meetings Paper SSRN, 972446.
